I live in a double-storey house with a vacant piece of land at the back. Since I moved in, I have had 'visitors' in the form of rats and lizards (big ones, too). <sup>every day</sup> I had to clean the lizard droppings and check for rats in my kitchen. Imagine the cleaning that had to be done each time a rat came a visiting. As I have pets, I did not want to use any form of chemical control, so I installed 2 units of Pest Free in my home last September. Since then I have not had a rodent visit. The lizards, too, have disappeared except for ~~the~~ one or two 'baby' lizards which creep in once in a while. However, they do not stay. So I am very glad that I purchased Pest Free.
